**MARC Nitrous Thermo Heat-Activated Drain Cleaner** is a granular material which will open up slow running drains and restore them to full capacity by destroying blockages. Slow running drains are caused by materials such as grease, slime and soap scum and hair. Use of **MARC Nitrous** will dissolve, melt away and clean out these deposits, and restore drain function. **MARC Nitrous** has a pleasant citrus fragrance with no acrid fumes, and works odorlessly in the drain without harming metal or plastic pipes.

### Directions For Use

*Wear rubber gloves and safety glasses when using! Keep face away from drain.*

**Drains:** Slowly pour one cup full of **MARC Nitrous** into drain, and run hot water to dissolve the product. Let stand for one minute and then flush drain with hot water for an additional minute. To maintain good drain flow, add 1/2 to 1 cup full of **MARC Nitrous** followed by flushing with hot water once a month. **If drain is completely clogged, use drain snake to establish some flow.**

**Grease Traps:** Use 1.25 pounds (1 container) of **MARC Nitrous** per 100 gallons of capacity. Slowly add in drain nearest to grease trap, run hot water to dissolve product and allow to stand overnight. This will keep grease and solids in liquid form.

### First Aid

**SKIN CONTACT:** Flush area with water for 10-15 minutes. If irritation persists, contact a physician. If extreme redness, blistering, or broken skin occurs, seek medical attention.

**EYE CONTACT:** Flush eye(s) with cold water for at least 15 minutes. Then cover eye(s) and get medical attention.

**IF SWALLOWED:** Contact physician or Emergency Services immediately. DO NOT induce vomiting. Drink large quantities of water, followed by milk, milk of magnesia, fruit juices, egg whites, diluted vinegar, vegetable oil, or a baking soda solution.
