DIRECTIONS FOR USE

RESTROOMS: Odor counteractant will effectively control urine odors. Clean and disinfect floors and fixtures as you normally would. Then spray Odor Counteractant (without diluting it) in and around each stool, urinal, and floor drain. Apply by spraying 1 or 2 applications at each location. It not only eliminates these odors, but will help prevent their recurrence.

SHOWER ROOMS: Spray Odor Counteractant into and around floor drains to effectively eliminate offensive odors. Odor Counteractant can also be used effectively in these areas by pouring one or two ounces directly into the drain.

LOCKER ROOMS: Spray Odor Counteractant along the bottom edge of each locker to cover up the sweat and body odors in the clothes.

KITCHEN: Spraying Odor Counteractant into garbage cans will eliminate offensive odors which attract flies. Also, spray into trash houses or fenced-in trash receptacles for control of sour milk and other offensive odors. Should be poured down drains leading to grease traps to control these odors.

NURSING HOMES & HOSPITALS: Spray Odor Counteractant in bathrooms and other areas where urine is evident. This is not a substitute for cleaning the room frequently, but will effectively eliminate these odors between cleanings. Spray Odor Counteractant in dirty linen baskets and carts to cover up odors between cleanings.

DRAIN ODORS: Spray Odor Counteractant on surfaces where sewage has backed up from drains. This should be done in addition to cleaning the area. Effective against normal drain odors. Pour two to six ounces in drain.

PET PROBLEMS: Spray Odor Counteractant in cat boxes, pet-sleeping areas, and waste areas. Can be used to cover up odor when cleaning up pet mistakes.

CESSPOOLS & SEPTIC TANKS: Pour an appropriate amount of Odor Counteractant directly into septic tanks, drain fields, and cesspools for objectionable odors.

WATER POLLUTION CONTROL PLANT: Effective at rate of 1 to 5 parts per million parts of sewage.

- ★ **Biodegradable**
- ★ **Deodorizer**
- ★ **Concentrated**

Odor Counteractant is a concentrated deodorant, and can be used at dilutions as low as 1 part per million parts of odor causing material.

Odor Counteractant has been used effectively for years as an odor counteractant in water pollution control systems (sewer plants & lagoons). Because of its high concentration, Odor Counteractant has been found to be one of the most effective odor controls available. Odor Counteractant will not adversely affect bacteria count or B.O.D.

WARNING: Contains nonionic emulsifier. Causes eye irritation. Wash thoroughly after handling. Use with adequate ventilation. Do not spray in eyes or on skin. Wear safety glasses and rubber gloves when using. Do not breathe vapors directly. If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do so. Continue rinsing. If eye irritation persists: Get medical attention. If on skin: Wash off thoroughly with water. If skin irritation persists: Get medical attention. Store in a cool, well-ventilated area. **KEEP OUT OF REACH OF CHILDREN!**
