

DESIGNED FOR

Sewage Treatment Plants

Lift Stations

Automatic Scrubbers

Power Washers

FEATURES

Concentrated Defoamer can be used in sewage treatment plants, and will not adversely affect the bacterial action.

Concentrated Defoamer is particularly helpful in eliminating foam in aerator tanks and trickling filters in sewage plants.

Concentrated Defoamer can also be dripped into waste streams where foam is a problem.

Concentrated Defoamer can be dripped or sprayed at a suggested rate of 0.5 to 1 part per million. This will generally result in immediate foam knockdown. Use more or less defoamer as required.

Highly Concentrated
Fast
Safe
Economical
Biodegradable

FEATURES

Concentrated Defoamer is a highly concentrated water soluble defoamer.

Concentrated Defoamer can be mixed with detergents when it is desirable to reduce or eliminate foam.

Concentrated Defoamer will not reduce the effectiveness of detergents, and is ideal for automatic scrubbers and power washers that cause foam problems.

The dilution ratio for detergents should be determined by the user, but Concentrated Defoamer may be effective at a rate as low as 1 part per million.
