### FEATURES

**MARC HALT** is a unique product which actually captures and eliminates offensive odors, unlike most other deodorants which simply cover them up. The action of **MARC HALT** is selective in that only malodors are affected – pleasing odors remain. This is made possible by the proprietary specially designed molecular configuration of **MARC HALT**.

The process of odor elimination by **MARC HALT** occurs almost immediately upon contact with the odor causing material. Thus, it is important to apply the product directly on the cause of the odor problem. Once **MARC HALT** has done its job, all that remains is its own pleasant fragrance.

**WARNING:** Contains nonionic emulsifier. Causes eye irritation. Wash thoroughly after handling. Use with adequate ventilation. Do not spray in eyes or on skin. Wear safety glasses and rubber gloves when using. Do not breathe vapors directly. If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do so. Continue rinsing. If eye irritation persists: Get medical attention. If on skin: Wash off thoroughly with water. If skin irritation persists: Get medical attention. Store in a cool, well-ventilated area. **KEEP OUT OF REACH OF CHILDREN!**

HMSI/NFPA Ratings: Health-0, Flammability-0, Reactivity-0

### DIRECTIONS

To clear the air of obnoxious odors, spray a fine mist into the air.

To eliminate room odors, lightly spray materials and surfaces such as curtains, drapes and carpets.

To control drain odors, pour several ounces into the drain.

To deodorize carpeting, add several ounces to the solution tank of a carpet extractor along with the regular cleaning product and clean carpet as usual.

To eliminate odors in vehicles such as cars, trucks and busses, lightly spray the air and seating and carpet surfaces.

For porta-toilets, add several ounces as required to control odors between cleanouts.

For waste treatment plants, spray directly onto odor causing material until thoroughly covered, or add at the rate of several parts per million as required.
