

## TECHNICAL DATA SHEET

**Product Name: TRACKER  
POWDER FIRE ANT CONTROL**

**Product Number: MARC 340**

**Appearance:** white powder

**Odor:** sweet

**Bulk Density:** 8.16 pounds per cubic foot

**Active Ingredients:** pyrethrins, piperonyl butoxide and silicon dioxide

**Solubility in Water:** dispersible

**Residual:** up to 6 months

**Packaging:** "quart" size dispensing squeeze bottle, 6 ounces per bottle

**Flash Point:** none

**Features:**

**MARC 340 Tracker** is a powder that quickly and effectively kills fire ants by dehydrating them – literally draining them of their moisture. Simply sprinkle **Tracker** on top of fire ant hills, especially near entrances. Once the ants track through the powder, special ingredients immediately begin to suck the moisture out of the ants. The ants that are able to crawl back into the mound have **Tracker** clinging to their bodies to contaminate the rest of the colony. **Tracker** works on contact and kills in seconds.

**Tracker** contains pyrethrins, the botanical insecticide derived from chrysanthemum flowers which is a contact and stomach poison for insects; piperonyl butoxide, which is a synergist that helps the other ingredients work better; and silicon dioxide to facilitate the dehydration of fire ants and other insects.

**Tracker** is also effective against a wide variety of other insects such as:

Bees \* beetles \* boxelder bugs \* cockroaches \* crickets \* dust mites \* fleas  
Scorpions \* silverfish \* spiders \* ticks \* wasps \* weevils
