

## **PRODUCT INFORMATION**

### **MARC 836 MICROFIBER PADS**

**Color:** blue

**Use:** dual-purpose – wet or dry

**Size:** 48 inches (actual size = 5.5 inches wide by 49 inches long)

**Attachment Type:** Velcro

**Description:** These pads consist of threads split into "microfibers." These fibers and the high density of the specially constructed fabric with wedge-shaped sections give the pads a large surface area. Their enormous absorption capacity and cleaning performance allow the pads to attract and retain dust and soils better than conventional fabrics without chemical treatment. When dry, the static electricity in the fibers contributes to the attraction of dust and dirt. When wet, capillary action takes over. The pads work best with just clean water. No fiber particles are left behind, while dirt is picked up, not just moved around. Change pad when saturated with dirt. May be laundered.
