

BIOFIBER MICROFIBER CLOTHS

DISPOSABLE DRY DUSTING AND SWEEPING CLOTHS

MARC BioFiber MicroFiber Cloths are disposable and economical dry dusting and sweeping cloths. During use, the cloth builds up an electrostatic charge that attracts and locks in dust and debris. This not only gets the surface cleaner than ordinary cloths, but also improves indoor air quality in schools, hospitals, nursing homes or wherever they are used. The long-fiber technology of these cloths also attracts bacteria, reducing cross-contamination in health care settings.

After use, **MARC BioFiber MicroFiber Cloths** can be easily and safely disposed of in landfills, or even composted. The cloths will break down in four to six weeks to less than one ounce of inert material. The cloths' biodegradability has been tested according to ASTM standard method D6400-99. The use of **MARC BioFiber MicroFiber Cloths** is ideal with any "green" cleaning program.

Each roll of **MARC BioFiber Microfiber Cloths** contains 100 sheets, 8" wide by 24" long.
